SHIFT-REDUCE PARSERS

Adapted from material by Jimmy Lin and Jason Eisner

Shift-Reduce Parsing

- Alternative to arc-factored models
- Cognitively plausible
- Better at short-range dependencies

Example

ROOT Economic news had little effect on financial markets .

Example

ROOT Economic ← news had little effect on financial markets .

Example

ROOT Economic ← news ← had little effect on financial markets .

Example

ROOT Economic ← news ← had little ← effect on financial markets .

Example

ROOT Economic ← news ← had little ← effect on financial ← markets .

Example

ROOT Economic ← news ← had little ← effect on financial ← markets .

Example

Example

Example

Example

Components

- Process a sentence word by word from a **buffer**
- You can temporarily place store words on a **stack**
- As you process you can either:

Components

- Process a sentence word by word from a **buffer**
- You can temporarily place store words on a **stack**
- As you process you can either:
 - *Shift*: Move a word from the buffer to the stack

Components

- Process a sentence word by word from a **buffer**
- You can temporarily place store words on a **stack**
- As you process you can either:
 - *Shift*: Move a word from the buffer to the stack
 - *Left*: The top of the stack is the child of the buffer's next word

Components

- Process a sentence word by word from a **buffer**
- You can temporarily place store words on a **stack**
- As you process you can either:
 - *Shift*: Move a word from the buffer to the stack
 - *Left*: The top of the stack is the child of the buffer's next word
 - *Right*: The buffer's next word is the child of the top of the stack

Initial and Final Conditions

- Initially the stack has root, the buffer has the sentence's words, and there are no edges
- At the end, the buffer must be empty

Action: Left

- Add an edge (w_j, w_i)
- w_i is the top of the stack
- w_j is the first word of the buffer
- Pop the stack

Action: Left

- Add an edge (w_j, w_i)
- w_i is the top of the stack
- w_j is the first word of the buffer
- Pop the stack
- Stack and buffer must be non-empty; w_i cannot be the root

Action: Right

- Add an edge (w_i, w_j)
- w_i is the top of the stack
- w_j is the first word in the buffer
- Pop the stack
- Replace w_j by w_i at the head of buffer

Action: Right

- Add an edge (w_i, w_j)
- w_i is the top of the stack
- w_j is the first word in the buffer
- Pop the stack
- Replace w_j by w_i at the head of buffer
- Stack and buffer must be non-empty

Shift

- Removes w_i from the buffer
- Places it on the stack

Shift

- Removes w_i from the buffer
- Places it on the stack
- Buffer must be non-empty

Shift Reduce Example

Stack

[root]

Buffer

[economic, news, had, little, effect,
on, financial, markets, .]

ROOT Economic news had little effect on financial markets .

Next action: 1. Shift

Next action:

Transition Sequence Algorithm

- Start with root on stack, buffer with whole sentence
- If there's nothing on the stack, you must *shift*
- If the top of the stack is the child of the top of the buffer, then make a *left* edge
- If the top of the buffer is is a child of the top of the stack and the top of the buffer has no children that have yet to be added to the tree, then make a *right*

How to apply to data

- Create oracle for all sentences
- Create three-way classifier for each possible actions
- Features
 - The top of the stack
 - Top two words on buffer
 - The parts of speech of the words

Complexity

Complexity

- A word can only enter the stack once
- So complexity is $O(2N)$

Stack

[root]

Buffer

[I, am, the, very, model, of, a,
modern, major, general]

Edges

Next action: 1. Shift
