Python: Classes

Data Science: Jordan Boyd-Graber
University of Maryland

Declaring

```python
class Foo:
  def __init__(self, x):
      self._val = x
  def get(self):
      return self._val
  def set(self, x):
      self._val = x
```

Calling

```
>>> f = Foo(3)
>>> f.get()
3
>>> f.set(4)
>>> f.get()
4
```

Multiple Objects

```
>>> g = Foo(6)
>>> g.get() + f.get()
10
```
